

To get started on the responsive portfolio assignment, you will need the correct files. To do this, we will be using some templates that I have created for you. Please follow these steps deliberately and carefully. The template files are available on the Project 1 assignment page as part of these instructions. I have created this printed version because I find it helps students through this complex process.

Check off each step when you have completed it.

- ☐ Save your current **portfolio.html** as **portfolio-old.html**.
- ☐ Save your current **main.css** as **main-old.css**.
- ☐ Create a new file and save it as **portfolio.html**. (You can save over your portfolio.html file because you have portfolio-old.html.)
- ☐ Click on html-template and copy that code into your new **portfolio.html** file. Save the file.
- ☐ Create a new file and save it as **main.css** in your styles folder. (You can save over your main.css file because you have main-old.html.)
- ☐ Click on css-template and copy that code into your new **main.css** file. Save the file.
- ☐ Open your **portfolio-old.html** file and copy your content code and your stylesheet code into the new **portfolio.html** file. **Make sure to put it in the correct locations.**
- ☐ If you have yet to add code from the **persona-to-code document** you have completed, add that code to your new **main.css** file.
- ☐ Upload your new portfolio.html and main.css files to the server.
- ☐ Use a HARD REFRESH from now on when refreshing your website in Firefox:
 - Mac: SHIFT + COMMAND + R
 - PC: CTRL + F5
